Docker deployment ke liye

1.Database URL Switch Karein:Step 1.

System / Application properties file me jayein:
url.local ko comment out karein (# url.local=...).
url.docker=jdbc:mysql://mysql:3306/project04 ko active karein aur file save karein.

2.Nayi WAR File Build Karein:Step 2 (Important).

Project par Right-click \Run As \Maven build... karein:Goals me clean install dalein aur Skip Tests tick karein.Run karein taaki updated URL ke sath nayi .war file target folder me ban jaye.

3.Project Folder Me CMD Open Karein:Step 3.

Project par Right-click \Show In \ System Explorer par click karein.Jo folder open ho, jahan Dockerfile aur docker-compose.yml rakhi hain, wahan address bar me **CMD** type karke Enter dabayein.Is dauran Docker Desktop background me running (open) hona chahiye.

4.Build aur Container Start Karein:Step 4.

CMD me ye commands run karein:
docker-compose build (nayi image build karne ke liye).**docker-compose up -d** (containers ko background me start karne ke

liye).

5.Browser Me Run Karein:Step 5.

Chrome open karein aur type karein:http://localhost:8080/Project04 (ya http://localhost:8080).
